PROFILE

Computer Engineering undergraduate with hands-on experience building and deploying machine-learning, deep-learning, and GenAI systems across NLP, computer vision, time-series data, and RAG. Experienced with PyTorch, TensorFlow, Scikit-learn, OpenCV, FastAPI, Hugging Face, and Git/GitHub. Built and deployed a CRAG/RAG application and implemented Transformer and ML concepts from scratch. Seeking an on-site AI/ML Engineering internship.

TECHNICAL SKILLS

Languages: Python, SQL | **ML/DL:** PyTorch, TensorFlow, Scikit-learn, CNNs, 1D-CNNs, Random Forest, YOLO, Transformers | **Computer Vision:** OpenCV, YOLO | **GenAI/NLP:** RAG, CRAG, BERT, Transformers, Sentiment Analysis | **Deployment:** FastAPI, Hugging Face, Docker basics, Git/GitHub | **Data:** Pandas, NumPy, Google Colab | **Concepts:** data preprocessing, model evaluation, BLS time-series analysis, APIs

PROJECTS

CRAG / Retrieval-Augmented Generation System — Hugging Face

- Built an end-to-end retrieval-augmented generation application for document-based question answering, including document processing, embeddings, retrieval, and generation.
- Implemented and deployed the working application on Hugging Face for public demonstration; currently planning a Self-RAG extension.

AI Video Surveillance System — In Development

- Developing an AI-enabled video surveillance system with camera management, video-stream processing, and computer-vision components.
- Working with Python/FastAPI, OpenCV, database-backed system design, Docker, and video-streaming concepts to build a deployable engineering system.

Exoplanet Detection Pipeline — ISRO Bharatiya Antariksh Hackathon 2026

- Built a hybrid CNN + Box Least Squares (BLS)/Random Forest pipeline to classify exoplanet transit signals from astronomical light-curve data.
- Designed a reusable inference pipeline and FastAPI service, with technical documentation covering architecture, pipeline flow, and use cases.

SELECTED LEARNING / FROM-SCRATCH PROJECTS

BERT Transformer from Scratch — Implemented core Transformer architecture in PyTorch, including self-attention and major building blocks to understand BERT-style language models.

Sentiment Analysis from Scratch — Built a text-classification learning project to understand the end-to-end NLP training and inference workflow.

Bone Image Classifier from Scratch — Built a deep-learning computer-vision classification workflow for bone images and explored model training and inference.

Machine Learning from Scratch — Implemented core machine-learning concepts and algorithms to strengthen understanding of model training, preprocessing, and evaluation.

HACKATHONS & LEADERSHIP

- Smart India Hackathon (SIH) — Participant.
- Technical Competition Coordinator — Intra-College Technical Fest: designed and organized rapid web-development challenges, coordinated submissions and evaluation, and managed on-ground execution.

EDUCATION

Bachelor of Technology, Computer Engineering — Silver Oak College of Engineering and Technology, Ahmedabad | Expected 2027 | Semester 7 | CGPA: 8.06/10 | SPI: 8.54/10

CERTIFICATIONS & COURSEWORK

Certifications: HarvardX Machine Learning and additional technical certifications. **Relevant Coursework:** Machine Learning, Deep Learning, Probability & Statistics, Data Structures & Algorithms, Computer Vision, Object-Oriented Programming, Database Management Systems.

LANGUAGES

English, Hindi, Gujarati
